

RAINBOW FOOD LIST

Web Application – Product & UI/UX Requirements

Developer Handover Document | Version 1.0 | October 2026

1. Project Overview

Rainbow Food List is intended to be a personalized nutrition and healthy-lifestyle web application combining daily calorie and activity tracking, BMI/weight progress, food discovery, local market pricing, personalized AI diet planning, and nutritionist appointments.

2. Main Product Goal

- Create a personal health and nutrition profile.
- Set a weight/health goal.
- Track calories, nutrition, activity and weight.
- Explore foods and local market prices.
- Generate an AI diet plan from user preferences and selected foods.
- Track progress and book nutritionist appointments.

3. Target Visual Direction

Use the attached target dashboard visual as the primary UI reference: clean health SaaS style, soft green/white palette, rounded cards, subtle shadows, friendly icons, clear charts and responsive layouts.

Figure 1. Target Rainbow Food List dashboard.

4. Main Navigation

Dashboard — Daily health summary and quick actions

My Health — BMI, weight, health indicators and personal goals

Food Explorer — Search and browse foods, nutrition, benefits and market price

AI Diet Planner — Generate personalized meal plans

My Diet Chart — Today/week meal schedule and nutrition summary

Activity — Walking, steps, distance, exercise and calories burned

Calories Burned — Activity-based calorie expenditure details

Progress — Weight, calorie, nutrition and activity trends

Goals — Set and monitor health/weight goals

Appointments — Find and book nutritionist consultations

Profile — Personal information, preferences and health data

Settings — Account, notifications, privacy and application settings

Help — FAQs/support

5. Dashboard

Calories: Example: 1,616 / 1,900 kcal; progress bar and % of daily target

Nutrition: Overall nutrition/balance indicator with carbs, protein, fat and fibre

Activity: Steps, distance, duration and estimated activity calories

Weight: Current weight, recent change and target weight

Today's Goal: Current weight → target weight, progress %, remaining amount

Energy Balance: Calories consumed, calories burned and daily target; avoid presenting net calories as a clinical conclusion

Health Overview: BMI, weight trend, activity level, calorie adherence, protein and fibre status

Today's Meals: Breakfast, lunch, snack and dinner with calories and food names

Weight Progress: 7D/30D/3M/6M chart with starting, current and target weight

Today's Activity: Walking plus optional running, cycling and exercise cards

AI Recommendation: Short personalized recommendation with button to open today's diet plan

Today's Diet Summary: Meal-wise calories and daily macro/fibre totals

Market Price: Featured food and its recent local price with update date/source

Next Appointment: Upcoming nutritionist consultation with quick booking/view button

6. Health Profile & Onboarding

- About You: name, age, sex, height, current weight.
- Lifestyle: sedentary, lightly active, moderately active, very active.
- Goal: lose weight, maintain weight, gain weight, or improve overall nutrition.
- Food Preferences: vegetarian/non-vegetarian, preferred foods, disliked foods, allergies/intolerances.
- Budget: optional daily/weekly food budget.
- Meals: preferred number of meals per day.
- Confirmation: show a summary and let the user edit before saving.

7. Food Explorer & Food Details

- Search/filter by food category; support Bangladesh-focused foods.
- Show nutrition, serving size, benefits, considerations, price, source and update date.
- Allow Favorite, Add to My Foods and Add to Diet.

8. AI Diet Planner & Diet Chart

- Use health profile, goal, selected foods, preferences, allergies/intolerances, meal frequency and optional budget.
- Generate breakfast, lunch, snack and dinner with portions, calories and key nutrients.
- Show daily totals, estimated cost and shopping list.
- Allow save, edit, regenerate, replace and log meals.

9. Activity & Progress

- Track walking, steps, distance, duration and estimated calories burned.
- Track weight, calories, protein/fibre and activity trends.
- Provide 7D, 30D, 3M and 6M charts.

10. Appointments

- Dedicated sidebar section named Appointments.
- Nutritionist list/profile, specialty, availability and consultation information.
- Date/time slot selection, booking confirmation and appointment history.
- Dashboard Next Appointment card with quick view/book action.

11. Backend & Data

User — account, authentication and basic profile

HealthProfile — age, sex, height, weight, activity level, goal, preferences

Goal — goal type, target weight, target date, status

Food — name, category, serving, nutrition, benefits, considerations

FoodPrice — food, location, price range, date, source

FavoriteFood / MyFood — user-food relationship

DietPlan — user, date/range, target calories, generated plan

Meal — breakfast/lunch/snack/dinner, time, foods, portions

Activity — type, duration, steps/distance, estimated calories

WeightLog — date, weight

NutritionLog — date, calories/macros/fibre

Appointment — user, nutritionist, date/time, type, status

Nutritionist — profile, qualification, specialty, availability

Notification — appointment reminders, diet reminders and system notices

12. Development Priority

Phase 1 – Core — Authentication, profile, health setup, dashboard, BMI, weight tracking, calorie/nutrition logging.

Phase 2 – Food — Food Explorer, food details, nutrition database, My Foods and price display.

Phase 3 – AI — AI Diet Planner, diet chart, shopping list and meal logging.

Phase 4 – Activity — Walking/activity logging, calories burned and activity trends.

Phase 5 – Progress — Weight/nutrition/activity analytics and goals.

Phase 6 – Appointments — Nutritionist profiles, availability, booking, confirmation and reminders.

Phase 7 – Advanced — Wearable integration, stronger price data pipeline, nutritionist portal/admin dashboard.

13. Acceptance Checklist

- The website visually follows the approved Rainbow Food List dashboard style.
- All sidebar sections are implemented and route correctly.
- Dashboard data is personalized to the logged-in user.
- Health profile and goals are saved and used in calculations/recommendations.
- Calories, nutrition and activity values update when logs change.
- Weight progress is stored historically and displayed as a chart.
- Food Explorer supports search, categories and food details.
- Food details show nutrition, benefits, considerations and price metadata.
- AI Diet Planner uses the user's profile and selected foods.
- Diet plans can be saved, edited, regenerated and logged.
- Appointments allow nutritionist discovery, slot selection and booking.
- Responsive design works on desktop, tablet and mobile.
- Loading, empty, error and success states are designed.
- User data is protected and role-based access is applied to nutritionist/admin features.

14. Final Developer Instruction

Do not simply add more cards to the existing dashboard. Reorganize the application into the separate functional sections in this document while maintaining the approved visual style. The target outcome is a polished, responsive nutrition platform connecting health tracking, food discovery, AI diet planning, activity, progress and nutritionist consultation.
